1. *Agave* spp. (agave, century plant)

Figure 1: Schematic representation of the experimental design. The diagram shows a sequence of events: a subject is presented with a stimulus (a word), then a response is given (a word), and finally a feedback is provided (a word). The sequence is repeated for multiple trials. The diagram is divided into two main sections: 'Stimulus' and 'Response'. The 'Stimulus' section shows a word being presented, and the 'Response' section shows a word being given. The 'Feedback' section shows a word being provided. The sequence is repeated for multiple trials.

Figure 1 is a line graph showing the effect of the concentration of the inhibitor on the rate of polymerization. The x-axis is labeled "Concentration of inhibitor (mole/l)" and ranges from 0 to 0.001. The y-axis is labeled "Rate of polymerization (mole/l·hr)" and ranges from 0 to 1.0. The curve starts at a rate of approximately 0.8 at 0 concentration and decreases sharply as the concentration increases, reaching a rate of about 0.1 at 0.001 mole/l. The curve is labeled "Inhibitor" and "Rate of polymerization".

Figure 1
